# ClearView

Product Code: 40120

Colors: Black

- Easy installation. Attaches to any television in minutes.
- Eliminates dust build up.
- Reduces eye strain and fatigue. By equalizing and eliminating the static field between TV (+) and Viewer (-), airborne dust and other contaminants are no longer attracted to the user's eyes.
- Full five year warranty.
- Prolongs the life of the television. The same static fields being generated from the screen attract millions of dust particles into the internal circuitry of the television. Without the *ClearView*, this decreases the life span of sensitive electronic componentry.
- Stabilizes color guns for brighter colors.
- "Ernie" lights up as he eats static & radiation.

## Installing the *ClearView* to Televisions

Congratulations on your decision to install a *ClearView* on your television. Installation requires about 10 minutes. For best performance, follow instructions completely and in the order they are listed. If you have questions on installation please call the *ClearView* Technical Assistance Hotline at: 1 -877-GND-ZERO (463-9376)

(1)

Turn OFF television and UNPLUG from power outlet.

(2)

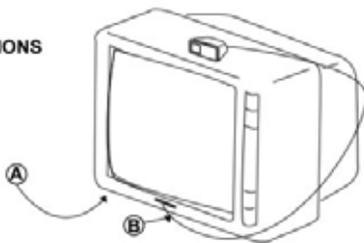

Place the *Clearview* (B) where you prefer. Typically on top of the TV or entertainment center.

(3)

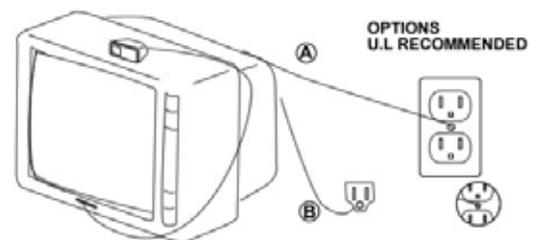

Decide on the best location of the static pickup (A) or (B) for your TV. Place the pickup on plastic bevel or any flat surface within 3" from the glass screen. Make sure the the area is wide enough to accommodate the pickup and that the area is relatively clean. If necessary, clean with rubbing alcohol to remove polish build-up. Peel cover from adhesive strip on pickup and press firmly in place. Route remainder of cord under

OPTIONS

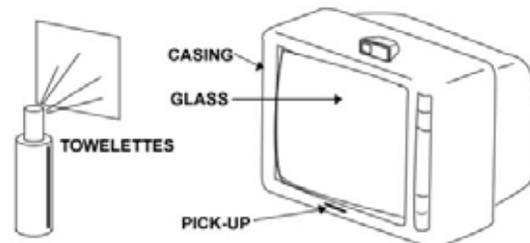

(4)

**IMPORTANT:** To perform properly the ring terminal must be grounded in one of the following methods. (A) Carefully remove the center screw of outlet face plate cover. DO NOT remove cover. Place screw thru ring terminal and replace face plate on outlet or (B) slip ring terminal over third prong of a 3 prong plug and install to receptacle.

(5)

Remove solution and towelettes from package. Liberally spray towelette with spray and wipe glass, casing and pickup thoroughly. Allow to dry for one minute, then reapply. Polish streaks with dry lint-free towelette. Do not allow solution to drip into vent holes of TV.

## HELPFUL HINTS & OTHER INFORMATION

**Warning:** This device and the enclosed solution is *not recommended* for *projection* style television sets or any set with plastic (rather than glass) screens. The majorities of televisions have a glass screen and are NOT projection type sets.

1. To test that your *ClearView* is hooked up properly, turn on the television set while watching the LCD area on the *ClearView*. The LCD ("Ernie") should display and fade off gradually. Keep in mind that many televisions produce so much static that "Ernie" will stay lit or "cycle" off and on with changes in the picture brightness or colors. This will not harm your *ClearView* in any way.
2. The solution plays a very big part in the exceptional performance of your *ClearView* system. The solution will not wear out or burn off in the majority of installations. Fingerprints or smudges can usually be removed by simply wiping with a dry towelette. In the event of more aggressive smudging apply a few drops of our solution to towelette, clean off smudge and polish with dry towelette. USE ONLY CLEARVIEW SPRAY TO CLEAN YOUR TV GLASS. DO NOT CLEAN WITH WATER or ANY OTHER CLEANING SOLUTION OTHER THAN CLEARVIEW. In the event your screen receives repeated smudging (sometimes the case with small children in the home), call your ClearView dealer and request *ClearView Spray*. .the convenient way to reapply.

### Problems???

- Q. The LCD flashes or doesn't come on at all...or...the LCD stays lit even when the TV is turned off!
- A. Check to see if your ClearView is properly grounded. If properly attached to ground the problem may be in the wiring of building or home. Call for technical assistance: (719) 676-3518.
- Q. It used to work well, now !'m starting to see a bit of dust or feel some static...
- A. Solution may have been removed... simply reapply. Additional ClearView solution may be purchased from your ClearView dealer.

### Method of Operation

A special conductive solution is supplied that renders the casing and glass of the monitor or television "conductive." Unique pickup configurations and materials "find" this conductive path and pull the charges to the collection unit. These charges are shared and controlled using a proprietary resistor bank and a custom liquid crystal display. Portions of the charge are "used" while the remainder of the charge is "slowed" and sent harmlessly to ground.
